

QUOTATION NO. MK17432/1

Our Ref : JL

Date : 06 December 2017

Hunters
Space One
Beadon Road
London
W6 0EA

Attention : Mr Bob Forrest

Dear Sirs

Re : Shepherd House, E14 3ET

Following our recent site survey we would like to offer the following report/recommendation.

1) Refuse Hopper Door/s

On close inspection we found the refuse hoppers at 5th & 8th floors do not meet with current BS Regs or Fire Regs. The hopper doors in situ was not considered to be fire rated. Our recommendation would be to replace said hoppers with immediate effect with new independently fire certified and smoke sealed units. All other hoppers on this block where found to be in good order.

We are pleased to quote, conforming to BS1703:2005, BS5906:2005 and our standard design.

Remove existing hopper doors and replace with new **independently fire tested and certified** refuse hoppers, grey hammer powder coated finish, bottom-hinged, vandal proof security fixings, self-sealing, self-closing and smoke-sealed to BS476 section 31.1 and BS5588 with a 1.5 hour fire rating to BS 476 part 22, section 6.

Our price for the above is :-

Supply, install and commission at £695.00 per standard hopper. (2 No. required)

Continued

2) Discharge Section.

The discharge section was found at the base of the chute was found to be in an extremely poor state of repair and currently have a manual cut off plate. The cut off plate is designed to allow the end user the facility to exchange waste containers once full. At present there is no facility to automatically close the base of the chute off in the event of a fire. This we believe to be a serious hazard and should be dealt with immediately. To make safe, our recommendation would be to replace the complete discharge section and manual cut off plate with a new independently fire certified fire shutter door with immediate effect (the new fire door can also be used a manual cut off plate)

We are pleased to quote, conforming to BS1703:2005, BS5906:2005 and our standard design.

Remove exiting discharge section and cut off plate and replace with new reinforced steel discharge section complete with a 2 hour fire tested and **independently fire tested and certified** automatic fire shutter door to BS476: Part 22: Section 6: 1987, set with high tensile loading spring and 70° fire tested fusible link.

Our price for the above is :-

Supply, install and commission at £3,450.00 per unit. (1 No. required)

3) Refuse chute to 2nd floor.

The refuse chute section on the 2nd floor was found to be in a poor state of repair with numerous cracks and holes clearly showing to out sections of the chute. Our recommendation would be to replace the chute section on the second floor entirely thus ensuring a safe and sealed unit.

Our price for the above is :-

Remove existing section and supply, install and commission new at £3,950.00 per unit. (1 No. required)

Servicing – Extended Warranty

To comply with Fire Regulations and British Standards BS1703:2005, BS5906:2005, all refuse hoppers and fire doors supplied by Hardall International Limited require regular maintenance by qualified service engineers. Regular servicing will also extend the warranty and prolong the life of the product. On completion of works, our service team will be more than happy to provide a competitive quotation.
